EEE/ECE-103IL: Computer Programming Laboratory
Fall 2025 (Section: 02)

Lab Final

1. Develop a **C program** that dynamically allocates memory to store the weights of **N packages** in a warehouse. The value of **N** and the package weights will be provided by the user. The package weights are stored in the order they arrive, which does not follow any specific pattern. [CO4] (10)

   For efficient loading:

   - **Lighter packages must be loaded first**
   - **Heavier packages must be loaded last**

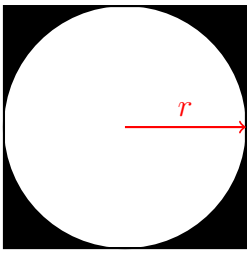
   Write a C program that performs the following tasks:

   - Dynamically allocate memory to store the package weights
   - Read **N** package weights from the user
   - Arrange the data according to the loading requirement
   - Display the final loading sequence

   Constraints:

   - Dynamic memory allocation mandatory
   - Do not use any built-in functions

2. The diagram below shows a circle inscribed in a square with both shapes sharing the same center. [CO4] (8)



a

   Let a be the side length of the square (user input). Write a C program using a function to:

   - Calculate the area of the square and circle
   - Calculate the percentage of the total square area that lies outside the inscribed circle (the black portion) and display the result up to two decimal places

   Use the formula:

$$\text{Area of circle} = \pi r^2$$

3. The following program is supposed to print **all integers** that are not divisible by 3 and 5 and lie between 1 and a user-defined number (inclusive). The program also counts the total **number** of such integers and prints the result. [CO4] (7)

No.	Code	Explanation/Corrected
1		
2	`int main() {`	
3	`int end;`	
4	`printf("Enter the end number:  ");`	
5	`scanf("%f", &end);`	
6	`int i, Count;`	
7	`count = 0;`	
8	`for(i=1; i<end; i++) {`	
9	`    if ((i/3 != 0) & (i/5 != 0)) {`	
10	`        count = count + 1;`	
11	`        printf("%d\n", i)`	
12	`    }`	
13		
14	`printf("Total count is:  %c\n", Count);`	
15	`}`
